

BIOBURST™ SEED TREAT

Product Information Sheet

BIOBURST™ SEED TREAT is a blend of micronutrients and biostimulants in a talc/bentonite carrier specifically designed for the treatment of seeds in planter boxes or other methods of dry treatment to increase germination and aid seedling development and growth.

Only a light dusting of seeds with **BIOBURST™ SEED TREAT** prior to planting is necessary.

DIRECTIONS FOR USE:

All application rates are volume measurements. Application should be made in a way that all seeds are thoroughly coated. Fill hopper box 1/2 full of seed, apply 1/2 of recommended dosage and stir completely. Fill hopper box with remaining seed, spread balance of recommended dosage on top and stir again. If build-up occurs in planter, reduce rate accordingly.

For best results treat seeds just prior to planting using the measuring device provided in the container (8 oz by volume) apply as follows:

CROP	APPLICATION RATE
ALFALFA/GRASS	8 oz by volume/25 lbs of seed
CORN/COTTON/PEANUTS MILO/SORGHUM	8 oz by volume/50 lbs of seed
WHEAT/BARLEY/OATS RICE/BEANS/SOYBEANS	8 oz by volume/60 lbs of seed
SUGAR BEETS	8 oz by volume/100 lbs of seed
POTATOES	8 oz by volume/450 lbs of seed
